

# Tint Film

*The top-notch Tint Film offers maximum protection all over to ensure that your car looks hot while you stay cool.*

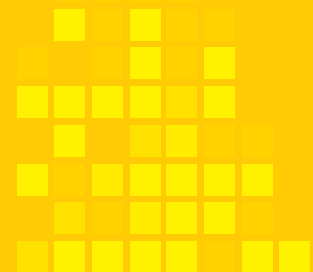

## Did you know?

Research from a leading Swedish auto maker shows that by increasing the cabin temperature from 21°C to 27°C, drivers miss 50% more signals presented in the first hour at the high temperature and response times were 22% slower.

## ***Think of it as sunscreen for your car!***

Cool down. Even as the temperature around the world is rising, you can keep your car interiors cooler with our range of high grade tint film. Sourced from renowned countries like the US, Japan and Korea, the film offers protection to you and your passengers as well as your car interior.

At DK Auto, our goal is to provide the best quality films available in the market, with Visible Light Transmission (VLT) ranging from 8% to 80%, 99% UV rejection and a Total Solar Energy Rejection (TSER) of up to 70% to suit various applications and individual needs, offering you the world's finest tint films and top class workmanship.

## ■ Why tint your window?

### Heat Insulation

Research shows that a temperature reduction of 7°C in a vehicle can be achieved through the use of heat isolative films. DK Auto's tint film reduces as much as half of the sun's heat energy, significantly cutting down heat gain in the vehicle. With cooler cabin temperature, drivers will enjoy a more comfortable ride.

### Enhanced Fuel Efficiency

With a cooler cabin, air conditioning usage is minimised, resulting in less fuel being used to power the air conditioner.

### Protection from the sun

DK Auto's tint films blocks off 99% of UV radiation, protecting the driver and passengers, especially babies and young children, from its harmful effects. It is extremely effective in preventing UV related skin cancers and ailments. Harmful UV rays and heat can also cause car upholstery to crack and fade, thus the tint film will act as a sunscreen for the car interior, protecting it from the ill effects of the blazing sun.

### Safety

Tint films hold the glass together during impact, making it shatter-resistant and safe. It is also an additional preventive measure against smash-and-grab car thieves.

### Enhanced Alertness

Studies show that discomfort due to temperature causes driver vigilance to decrease. Eye fatigue due to glare and UV also contributes to slower observations and reactions. DK Auto's tint film eliminates these problems. Greater temperature comfort and reduced eye fatigue improve the vigilance and alertness of the driver thus causing significant improvement in road and driving safety.

### Environmental Conservation

Reduced energy consumption of the vehicle's air conditioner results in less fuel consumption and lesser air polluting emission. This in turn lengthens the life span of the air conditioner, thus reducing the release of the environmentally harmful CFC into the atmosphere. DK Auto's tint film puts you in stride with the environmental conservation programme.

### Enhanced Privacy

DK Auto's tint films are available in various shades that add different degrees of privacy, especially when driving alone at night time in urban areas. Tinting protects your privacy and contents within a car. What a burglar can't see, he won't steal.

### Beauty

DK Auto's tint films are available in an array of colors to complement any car, it enhances your car's appearance, offering lasting good looks and added protection for you and your car.
